

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	01 July 2026
Team ID	SWTID-2026-9246
Project Name	AI-Enabled Student Admission System
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Form Registration through Gmail Registration through LinkedIN
FR-2	User Confirmation	Confirmation via Email Confirmation via OTP
FR-3	Application Management	Create and submit student application Upload and manage documents Edit application before final submission Track application status
FR-4	AI-based Eligibility Evaluation	AI scoring to evaluate eligibility Program/course recommendation Predict admission probability
FR-5	Communication & Notifications	Email/SMS notifications for updates Application status notifications Reminder notifications for incomplete steps
FR-6	Payment Processing	Secure fee payment via payment gateway Payment status confirmation Generate payment receipts
FR-7	Admin & Admission Management	Review and verify applications Approve / Reject / Waitlist applications Manage programs, intakes, and seats
FR-8	Reporting & Dashboards	Real-time dashboards for admission insights Reports on applications, conversions, and trends Export reports for analysis

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The system should provide an intuitive and user-friendly interface for applicants, counselors, and administrators.
NFR-2	Security	Ensure data privacy and protection with role-based access, encryption, and adherence to security best practices.
NFR-3	Reliability	The system should function accurately with minimal errors and ensure data integrity.
NFR-4	Performance	The system should handle high concurrent users and large volumes of applications with optimal response time.
NFR-5	Availability	The system should be available 24/7 with minimal downtime (target uptime $\geq 99.5\%$).
NFR-6	Scalability	The system should be scalable to support growing number of users, applications, and future enhancements.
