

Project Design Phase
Proposed Solution

Date	01 July 2026
Team ID	SWTID-2026-9246
Project Name	AI-Enabled Student Admission System
Maximum Marks	2 Marks

Proposed Solution:

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Educational institutions face challenges in managing large volumes of student applications, manual data entry, eligibility verification, and communication with applicants. This leads to delays, data errors, non-transparent processes, and poor student experience.
2.	Idea / Solution description	A <u>Salesforce</u> AI-enabled Student Admission System that automates and streamlines the end-to-end admission process. The system uses AI to predict student eligibility, personalize communication, and provide insights to admission teams for better decision-making.
3.	Novelty / Uniqueness	• AI-driven eligibility prediction and smart application scoring • Personalized guidance & chatbot assistance for applicants • End-to-end automation on Salesforce (no-code/low-code) • Real-time dashboards for admission analytics and insights
4.	Social Impact / Customer Satisfaction	• Improves access to education through a fair and transparent process • Saves time for students and admission staff • Reduces errors and improves trust in the admission process • Higher satisfaction due to faster response and clear communication
5.	Business Model (Revenue Model)	• SaaS model for educational institutions (annual subscription) • Tiered pricing based on institution size and features • Additional revenue from premium analytics and customization • Upsell opportunities: onboarding, training, and support services
6.	Scalability of the Solution	• Built on Salesforce Cloud – scalable, secure, and multi-tenant • Can support multiple institutions, courses, and admission cycles • Modular architecture allows easy addition of new features • AI models improve over time with more data and feedback
