

AI-ENABLED STUDENT ADMISSION SYSTEM

Date	01 July 2026
Team ID	SWTID-2026-9246
Developed by	APPALA GAYATRI AKHILA
Project Name	AI ENABLED STUDENT ADMISSION AND SUPPORT MANAGEMENT SYSTEM

1. INTRODUCTION

1.1 Project Overview:

The AI-Enabled Student Admissions & Support Management System is a centralized Salesforce application designed to streamline and enhance student admissions using AI-driven intelligence and automation.

The system enables:

- AI-based student application prioritization
- Intelligent admission and discount recommendations
- Risk identification for enrollments
- Real-time alerts for high-priority applications
- Centralized visibility into admission performance

1.2 Objectives

- Provide an AI-assisted platform for efficient student admissions
- Automate prioritization, approval, and follow-ups using Flows and Agentforce
- Reduce manual effort and subjective decision-making
- Ensure secure, role-based access for counselors, managers, and admins
- Improve admission efficiency, accuracy, and student experience

2. REQUIREMENT ANALYSIS AND PLANNING PHASE

2.1 Understanding Business requirements

The Student Admissions & Support Portal is designed to solve common challenges faced by training institutes and educational organizations. These organizations need a centralized system to manage student information, course offerings, enrollments, approvals, communication, and reporting, while also leveraging AI to reduce manual effort and improve decision-making.

Currently, most institutes rely on spreadsheets or disconnected systems to track students and courses. This leads to data duplication, lack of visibility, security risks, and delayed approvals. Salesforce is chosen as the CRM platform because it provides a secure, scalable, multi-tenant architecture with built-in automation and AI capabilities through Agentforce.

The business requires:

- Centralized student and course management
- Controlled access based on user roles
- Automated enrollment and approval processes
- Real-time reports and dashboards
- AI-powered assistance for counselors and admins

2.2 Defining Project Scope and Objectives

Project Scope

The scope of this project includes building a complete Salesforce application using Admin tools and Agentforce, without custom Apex development. The application will support the end-to-end lifecycle of student admissions and support.

Objectives

- Implement Salesforce CRM fundamentals in a real-world scenario
- Design a scalable data model using standard and custom objects
- Apply security at org, object, field, and record levels
- Automate business processes using Flows and Approval Processes
- Enable reporting and dashboards for decision-making
- Introduce Agentforce for AI-driven insights and assistance

2.3 Data Flow Diagram

User → Salesforce UI → Custom Objects → Validation Rules → Flows → Reports → Dashboards.

3. SALESFORCE DEVELOPMENT – BACKEND & CONFIGURATION

3.1 Milestone 1: Salesforce Account

Salesforce is game-changing technology, with a host of productivity-boosting features, that will help you sell smarter and faster.

Salesforce is your customer success platform, designed to help you sell, service, market, analyze, and connect with your customers. It is the world's leading Customer Relationship Management (CRM) platform, designed to help organizations build, manage, and grow strong customer relationships.

This milestone involves setting up the Salesforce Developer Org, which serves as the development environment for the project. The organization is configured with Lightning

Experience and the required administrative settings. User authentication, organization preferences, and security settings are verified before development begins. This provides the foundation for building the Student Admission & Support Management System.

3.2 Milestone 2: Objects Creation

The data model of the application is created by defining standard and custom objects.

Standard Objects

- Contact (Student)
- Opportunity (Admission)

Custom Objects

- Course
- Student Enrollment

Object Type	Object API Name	Purpose
Standard Object	Contact	Stores student information such as Student ID, Education Level, and Student Status.
Standard Object	Opportunity	Represents the admission/application process and tracks admission stages, fees, payment status, and counselor assignment.
Custom Object	Course__c	Stores course details including Course Code, Category, Fee, Duration, Status, and Capacity.

Custom Object	Student_Enrollment__c	Junction object connecting Students and Courses. Stores enrollment details, discounts, approval status, payment status, and calculates the final payable amount.
----------------------	------------------------------	--

These objects store student details, course information, admission records, and enrollment data while establishing the core structure of the CRM application.

3.3 Milestone 3: Tabs

Custom tabs are created for all major objects to provide easy navigation within Salesforce. Tabs allow users to quickly access Student, Course, and Student Enrollment records from the Lightning interface.

The tabs are added to the Lightning Application, making the system organized and user-friendly.

Tab Name	Object Type	Purpose
Students	Standard Object (Contact)	View and manage student records.
Admissions	Standard Object (Opportunity)	Track admission opportunities, stages, and payment details.
Courses	Custom Object (Course__c)	Manage course information such as fee, duration, and capacity.
Student Enrollments	Custom Object (Student_Enrollment__c)	Manage enrollments, approvals, discounts, and payment status.

3.4 Milestone 4: Fields & Relationships

Custom fields are created to capture admission-related information such as Student ID, Education Level, Course Fee, Enrollment Status, Payment Status, Discount Percentage, and Approval Status. Relationships are established using **Lookup** and **Master-Detail** relationships to connect Students, Courses, and Student Enrollments.

Formula fields are also created to automatically calculate values like the Final Payable Amount after discounts.

Object	Field Name	Data Type	Required
Contact	Student ID	Auto Number S-{0000} Starting Number-1	
	Education Level	Picklist(Graduate, UG, Diploma)	
	Student Status	Picklist (New, Enrolled, Completed)	
Opportunity	Admission Stage	Picklist(Inquiry, Applied,Enrolled)	
	Expected Start Date	Date	

	Payment Status	Picklist(Pending, Paid, Partial)	
	Counselor Assigned	Lookup (User)	
	Total Course Fee	Currency	
Course__c	Course Code	Text	
	Course Category	Picklist(Technical,Non Technical)	
	Course Fee	Currency	
	Course Duration	Number	
	Course Status	Picklist(Active, Inactive)	
	Capacity	Number	
Student_Enrollment__c	Student	Master- Detail(Contact)	
	Course	Master- Detail(Course)	
	Enrollment Date	Date	
	Discount Percentage	Percent	
	Final Payable Amount	Formula(Currency) Course__r.Course_Fee__c * (1 - (Discount__c / 100))	
	Enrollment Status	Picklist(Draft, Pending Approval, Approved)	
	Approval Status	Picklist(Pending, Approved,Rejected)	
	Payment Status	Picklist(Paid, Pending)	

3.5 Milestone 5: Validation Rules

Validation Rules are implemented to maintain data quality and prevent incorrect information from being saved.

Examples include:

- Mandatory student details before saving.
- Discount percentage cannot exceed the allowed limit.
- Enrollment date cannot be earlier than the current date.
- Required fields must be completed before approval submission.

These validations improve accuracy and reduce manual errors.

3.6 Milestone 6: Approval Process

Approval Processes automate admission decisions requiring managerial authorization. For example:

- Student enrollments with high discounts are automatically routed to the Admission Manager.
- Managers can approve or reject requests.
- The enrollment status is updated automatically after the decision.

This ensures controlled and transparent approval workflows.

3.7 Milestone 7: Email Templates

Reusable email templates are created for automated communication with students and staff.

Typical templates include:

- Admission Confirmation
- Enrollment Approval
- Enrollment Rejection
- Payment Reminder
- Course Registration Confirmation

These templates maintain consistency in communication while reducing manual effort.

3.8 Milestone 8: Email Alerts

Email Alerts automatically send notifications when specific business events occur.

Examples include:

- Admission application submitted.
- Enrollment approved.
- Enrollment rejected.
- Approval request sent to the manager.
- Payment reminders before course commencement.

This keeps students and administrators informed throughout the admission lifecycle.

3.9 Milestone 9: Declarative Automation (Flows)

Salesforce Flow Builder is used to automate business processes without writing code.

Flows are created to:

- Automatically assign enrollment status.
- Calculate payable fees.
- Create follow-up tasks.
- Send email notifications.
- Route approval requests.
- Update records based on business conditions.

These automations significantly reduce manual work while improving operational efficiency.

3.10 Milestone 10: Agentforce AI

Agentforce brings Artificial Intelligence into the admission process by providing intelligent recommendations and decision support.

The AI capabilities include:

- Student application prioritization.
- Risk analysis for enrollments.
- Admission recommendations.
- Discount suggestions.
- AI-generated summaries for counselors.
- Intelligent assistance for faster admission decisions.

Agentforce enables smarter, data-driven admissions while improving productivity and student experience.

4. UI/UX DEVELOPMENT & CUSTOMIZATION

The UI/UX Development & Customization phase focuses on building an intuitive, secure, and productivity-driven interface for the AI-Enabled Student Admission Management System.

The objective of this phase is to provide a seamless and data-driven experience for admission counselors, academic managers, and administrators to:

View AI-driven student application insights

- Prioritize high-priority student enrollments
- Evaluate discount and risk recommendations
- Manage approval-driven admissions
- Track enrollment status and AI suggestions efficiently

During this phase, Lightning Applications, Lightning Record Pages, Home Pages, Page Layouts, Dynamic Forms, and Quick Actions are created and customized to ensure:

- Clear visibility of AI-generated student insights (priority score, risk indicators, recommendations)
- Role-based access to student data, approvals, and actions
- Minimal navigation with focused admission workflows
- Faster and informed decision-making for counselors and managers
- A clean, modern UI aligned with real-world education and admission processes

This phase ensures that backend automation and Agentforce intelligence are effectively translated into actionable UI components, enabling users to interact confidently with AI-powered recommendations while keeping the solution Agentforce-ready, scalable, secure, and easy to extend for future academic programs and institutional needs.

4.1 Milestone 11: The Lightning App

A custom Lightning Application is created to combine all project components into a single workspace.

The app includes:

- Home Page
- Student Management
- Course Management
- Enrollment Management
- Reports
- Dashboards
- AI components

This provides users with a centralized interface for managing the entire admission process.

4.2 Milestone 12: Editing of Page Layouts

Page Layouts are customized to display only relevant fields for different users. The layouts are designed to:

- Improve readability.
- Organize student information logically.
- Highlight important admission details.
- Display approval and payment information.
- Provide quick access to related records.

This enhances productivity by simplifying data entry and record management.

4.3 Milestone 13: Dynamic Forms

Dynamic Forms make Lightning Record Pages more interactive by displaying fields based on specific conditions.

Examples include:

- Showing approval fields only when enrollment is pending.
- Displaying payment information only after approval.
- Revealing discount details only for authorized users.
- Showing AI insights based on user roles.

Dynamic Forms reduce clutter and improve the user experience by displaying only relevant information.

4.4 Milestone 14: Users

A user is anyone who logs in to Salesforce. Users represent people involved in the Loan Processing & Approval System, such as loan applicants, loan officers, loan managers, and administrators, who need access to loan records and related data.

Each user in Salesforce has a user account.

The user account identifies the user, and the user account settings determine what features, objects, and records the user can access based on their role and profile.

Different Salesforce users are created to simulate real organizational roles.

Typical users include:

- **System Administrator** – Full system access and configuration.
- **Admission Manager** – Reviews approvals, monitors AI insights, and manages the admission team.
- **Admission Counselor** – Creates student records, manages enrollments, and interacts with assigned students.

Each user is assigned appropriate profiles, permissions, and roles to ensure secure, role-based access to data and application features.

5. DATA MIGRATION, TESTING & SECURITY

AI-Enabled Student Admissions & Support Management System

The Data Migration, Testing & Security phase focused on migrating student, course, and enrollment data into Salesforce, validating end-to-end AI-assisted admission workflows, and enforcing robust security controls.

This phase ensured data accuracy, system reliability, scalability, and controlled access before the solution was rolled out to admission counselors, admission managers, and administrators.

Additionally, performance tuning and optimization activities were implemented to support multiple concurrent users accessing student records, enrollment data, approval workflows, and Agentforce-powered AI insights simultaneously.

5.1 Data Migration

The AI-Enabled Student Admissions & Support Management System required migration of existing student admission data from spreadsheets or legacy systems into Salesforce to enable accurate AI analysis, prioritization, and recommendations.

Steps Followed:

- Imported Student data using Data Import Wizard
- Imported Course and Student Enrollment data using Data Loader
- Used Student Email and Enrollment ID as unique identifiers to prevent duplicates
- Ensured accurate relationships between:
 - Student and Student Enrollment
 - Course and Student Enrollment
 - Student Enrollment and AI-generated insights (Priority Score, Risk Analysis)
- Verified migrated data using Reports and List Views

Data Validations:

- Mandatory fields verified:
 - Student Name
 - Email
 - Course
 - Course Fee
 - Enrollment Date
- Duplicate prevention using:
 - Matching Rules on Student Email
 - Duplicate Rules on Student Enrollment
 - Existing Validation Rules and Record-Triggered Flows ensured:
 - Valid discount percentages
 - Mandatory approval for high-discount enrollments
 - Correct AI priority score assignment logic

5.2 Testing

Testing ensured reliable functioning of the AI-assisted student admission lifecycle, from application creation to enrollment approval and AI-driven prioritization.

Testing Types Conducted:

I. Unit Testing

- Verified Apex logic (if applicable) for:
 - AI priority score calculation
 - Risk analysis logic
 - Approval status updates
- Ensured compliance with Salesforce governor limits
- Achieved required test coverage for all Apex components

II. Integration Testing

- Verified relationships between:
 - Student and Student Enrollment
 - Course and Student Enrollment
- Tested interaction between:
 - Record-Triggered Flows
 - Approval Processes
 - Email Alerts
 - Agentforce prompt actions
- Validated seamless handoff between:
 - Backend automation
 - UI components
 - AI recommendations

III. User Acceptance Testing (UAT)

- Conducted with sample users:
 - Admission Counselor
 - Admission Manager
 - System Administrator

UAT Scenarios:

- Creating and updating student records
- Creating student enrollments
- Automatic AI priority identification
- Submitting high-discount enrollments for approval
- Reviewing AI-generated summaries and risk insights
- Approving or rejecting enrollments
- Receiving email alerts and notifications

Outcome:

- User feedback collected and implemented
- Improved clarity of AI priority indicators
- Optimized page layouts for admission workflows
- Confirmed smooth operation across desktop and mobile devices

5.3 Security Implementation

Security was configured to ensure controlled access to sensitive student data and AI-generated insights.

Role Hierarchy

- System Administrator – Full access
- Admission Manager – Team visibility, approvals, AI insights
- Admission Counselor – Manage assigned students and enrollments

Field-Level Security

Sensitive fields such as:

- AI Priority Score
- Risk Level
- Discount Percentage
- Approval Status

Visible only to Admission Managers and System Administrators, hidden from counselors where required.

Record-Level Security

Org-Wide Defaults:

- Student = Private
- Student Enrollment = Private
- Course = Public Read Only

Sharing Rules:

- Admission Counselors can access assigned records
- Admission Managers have read/write access to team records

5.4 Performance Tuning & Optimization

Performance optimization ensured fast and scalable AI-enabled admission operations.

1. Flow Optimization

- Entry conditions applied early
- Avoided unnecessary updates
- Used scheduled flows efficiently for reminders

2. Automation Efficiency

- No unnecessary updates inside loops
- Bulk-safe flow logic
- Approval submissions controlled via conditions

3. Page Layout Optimization

Streamlined layouts for:

- Student
- Course
- Student Enrollment

Used formula fields for:

- Final payable amount
- Risk indicators
- Discount flags

4. Security & Caching Enhancements

- Field-level security enforced in flows and UI
- Agentforce prompts restricted by object access
- Scalable architecture supporting future enhancements

5.6 Milestone 15-Duplicate and Matching Rules

This milestone ensures data integrity in the AI-Enabled Student Admissions & Support Management System by preventing duplicate Student (Contact) records and duplicate Student Enrollment records using Matching Rules and Duplicate Rules.

Accurate and clean admission data is critical for:

- Reliable AI priority scoring
- Correct risk and eligibility analysis
- Meaningful Agentforce recommendations
- Accurate enrollment approvals and reporting

5.7 Milestone 16: Profiles

A profile is a group/collection of settings and permissions that define what a user can do in salesforce. Profile controls “Object permissions, Field permissions, User permissions, Tab settings, App settings, Apex class access, Visualforce page access, Page layouts, Record Types, Login hours & Login IP ranges. You can define profiles by the user's job function. For example, System Administrator, Developer, Sales Representative.

Types of profiles in salesforce

1. Standard profiles:

By default, salesforce provides below standard profiles.

- Contract Manager
- Read Only
- Marketing User
- Solutions Manager

- Standard User
- System Administrator.

We cannot delete standard ones

Each of these standard ones includes a default set of permissions for all of the standard objects available on the platform.

2. Custom Profiles:

Custom ones defined by us.

They can be deleted if there are no users assigned with that particular one

5.8 Milestone 17: Roles & Role Hierarchy

A role in Salesforce defines a user's record-level data visibility.

Roles control who can see whose records in the organization hierarchy.

In the AI-Enabled Student Admissions & Support Management System, roles are used to ensure:

- Admission counselors see only their assigned students and enrollments
- Admission managers can see all team records
- Secure and structured access to student data

Role Hierarchy Used in This Project:

Admission Manager

Creating the Role Hierarchy

You can build on the existing role hierarchy shown on this page. To insert a new role, click **Add Role**.

Your Organization's Role Hierarchy

[Collapse All](#) [Expand All](#)

6. DEPLOYMENT, DOCUMENTATION & MAINTENANCE

6.1 Deployment

The Deployment, User Training & Adoption phase focuses on rolling out the AI-Enabled Student Admissions & Support Management System into a production-ready environment, ensuring users are well-trained, AI features are effectively adopted, and the system delivers measurable academic and operational value.

This phase ensures that Admission Counselors, Admission Managers, and System Administrators can confidently use AI-powered insights and Agentforce recommendations to:

- Prioritize high-value student applications
- Make informed admission and discount decisions
- Improve enrollment efficiency
- Deliver better student engagement and support

Deployment Strategy

The AI-Enabled Student Admissions & Support Management System was deployed following Salesforce best practices to ensure:

- System stability
- Data security
- Minimal disruption to ongoing admission activities

Deployment Steps Followed

1. Validated all Flows, Approval Processes, Email Alerts, Agentforce configurations, and custom metadata in the sandbox
 2. Ensured required test coverage for any Apex components (if applicable)
 3. Performed final regression testing on:
 - Student application creation
 - AI priority identification
 - High-discount enrollment approvals
 - Email notifications and reminders
 4. Deployed components using Change Sets / Metadata Deployment:
 - Custom Objects (Student_Enrollment__c)
 - Custom Fields (AI Priority Score, Discount %, Approval Status, Risk Level)
 - Flows (Record-Triggered, Scheduled, Screen Flows)
 - Approval Processes
 - Email Templates and Email Alerts Lightning Apps, Pages, and Dynamic Forms
 5. Agentforce configurations (Agents, Prompts, Data Library)
- Validated deployment in Production using sample student and enrollment records

User Training & Enablement

User training was critical to ensure successful adoption of AI-driven admissions workflows.

Target Users

- Admission Counselor
- Admission Manager
- System Administrator

Training Topics Covered

For Admission Counselors

- Understanding AI Priority Scores
- Identifying high-priority student applications
- Using AI insights on Student Enrollment record pages
- Submitting enrollments for approval
- Managing follow-ups using tasks and reminders

For Admission Managers

- Reviewing high-discount enrollment requests
- Interpreting AI risk analysis and recommendations
- Making approval decisions using AI summaries
- Monitoring team workload and enrollment trends

For System Administrators

- Managing Agentforce agents and prompt templates
- Monitoring flows, approvals, and email alerts
- Updating AI thresholds and business rules
- Troubleshooting automation and security issues

Training Methods

- Live demonstration sessions
- Scenario-based walkthroughs
- Hands-on practice using sample admission data
- Q&A and feedback session

User Adoption & Change Management

To encourage adoption, the system was designed to seamlessly integrate AI insights into daily admission workflows.

Adoption Strategies

- Embedded AI and Agentforce components directly on:
 - Home Page
 - Student Enrollment Record Page
 - Lightning App
- Minimal learning curve by leveraging standard Salesforce UI
- Clear labels and descriptions for AI-generated insights
- Automated AI recommendations to reduce manual decision-making

6.2 Monitoring & Post-Deployment Support

After deployment, continuous monitoring was implemented to ensure system reliability and user satisfaction.

Monitoring Activities

- Tracked usage of AI priority and recommendations
- Monitored enrollment conversion rates
- Reviewed approval turnaround times
- Checked performance of flows and scheduled automations

Support Activities

- Addressed user queries and feedback
- Fine-tuned AI priority thresholds based on real data
- Improved UI labels and help text

- Enhanced AI recommendation clarity and relevance

Business Impact & Outcomes

The successful deployment of the AI-Enabled Student Admissions & Support Management System resulted in:

- Faster student application processing
- Better focus on high-priority applicants
- Reduced manual effort for admission analysis
- Improved approval efficiency
- Better decision-making using AI-driven insights
- Increased productivity of admission teams

Project Documentation

Project documentation for the AI-Enabled Student Admissions & Support Management System serves as a comprehensive reference capturing:

- Business objectives
- AI-driven design and Agentforce usage
- Automation logic (Flows & Approvals)
- Data model and security configuration
- Deployment readiness

The documentation ensures that student admission requirements—such as application prioritization, discount approval, AI-assisted decision-making, enrollment tracking, and performance monitoring—are clearly defined and accurately mapped to Salesforce capabilities.

Documentation Benefits

- Acts as a blueprint for administrators and future enhancements
- Supports user onboarding, training, troubleshooting, and maintenance
- Documents all:
 - Objects and relationships
 - Flows and Approval Processes
 - Email Templates and Alerts
 - Agentforce Agents and Prompt Templates
 - Security configurations
- Assists in audit readiness, governance, and knowledge transfer
- Ensures long-term scalability and sustainability of the solution

7. SAMPLE OUTPUT

8. FUTURE ENHANCEMENTS

The AI-Enabled Student Admission & Support Management System has been designed with a scalable architecture, making it easy to extend with additional features as institutional requirements evolve. Future enhancements can further improve automation, student engagement, and data-driven decision-making. Planned enhancements include:

- **Student Self-Service Portal:** Develop a secure portal where students can register, submit applications, upload documents, track admission status, and communicate with counselors.
- **Mobile Application:** Build a mobile application for Android and iOS to provide real-time notifications, admission updates, and course information on the go.
- **AI Chatbot Integration:** Integrate an AI-powered chatbot using Salesforce Agentforce to answer admission-related queries, assist applicants, and provide personalized guidance 24/7.
- **Predictive Analytics:** Implement advanced AI models to predict admission success, student retention, and enrollment trends, enabling proactive decision-making.

- **Scholarship Recommendation System:** Use AI to recommend scholarships and financial aid opportunities based on student eligibility, academic performance, and financial background.
- **Learning Management System (LMS) Integration:** Integrate the application with LMS platforms such as Moodle or Canvas to enable seamless course enrollment and academic progress tracking.
- **Document OCR and Verification:** Automate document verification using Optical Character Recognition (OCR) technology to extract and validate information from uploaded certificates and identity documents.
- **Payment Gateway Integration:** Integrate secure online payment gateways to allow students to pay admission and course fees directly through the application.
- **Advanced Dashboards and Analytics:** Enhance reporting with interactive dashboards that provide insights into admissions, enrollments, counselor performance, and AI-generated trends.
- **Multi-Institution Support:** Extend the system to support multiple educational institutions, departments, and campuses within a single Salesforce organization.

These enhancements will further strengthen the system by improving user experience, expanding AI capabilities, and supporting the growing digital transformation needs of educational institutions.

9. CONCLUSION

The **AI-Enabled Student Admission & Support Management System** successfully demonstrates how Salesforce CRM and Agentforce AI can be utilized to modernize and automate the student admission process. The application provides a centralized platform for managing student information, course details, enrollments, approvals, and communication while reducing manual effort through intelligent automation.

By implementing custom objects, validation rules, approval processes, email automation, Lightning components, Dynamic Forms, and Salesforce Flows, the system streamlines admission workflows and ensures data accuracy. The integration of Agentforce AI enhances decision-making by providing intelligent recommendations, risk analysis, and application prioritization, enabling admission teams to process applications more efficiently.

The project also emphasizes security through role-based access control, profiles, and sharing rules, ensuring that sensitive student information is protected. Comprehensive testing and deployment practices ensure that the application is reliable, scalable, and ready for real-world implementation.

Overall, the project achieves its objective of creating an efficient, secure, and AI-powered admission management solution. It highlights the practical application of Salesforce declarative development and Agentforce AI while providing valuable learning experience in CRM implementation, business process automation, and intelligent decision support for educational institutions.
